

# Data Analyst Project Portfolio

## 1. Tata\_Data\_Visualisation

|                          |                                                                                                                                                                                           |
|--------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Brief Description</b> | Data analysis and business insights project based on an online retail transaction dataset, completed as part of the Tata Data Visualisation Virtual Experience.                           |
| <b>Tools / Approach</b>  | Power BI; data visualisation; data cleaning and preparation; time-series analysis; country and customer analysis; geographic/map visualisation.                                           |
| <b>Key Outcomes</b>      | Created business-focused visual insights covering revenue trends, top countries, top customers, and geographic markets, with findings translated into practical business recommendations. |
| <b>GitHub Link</b>       | <a href="https://github.com/Mahanand4/Tata_Data_Visualisation">https://github.com/Mahanand4/Tata_Data_Visualisation</a>                                                                   |

## 2. Credit\_Cards\_Financial\_Analysis\_PowerBI

|                          |                                                                                                                                                         |
|--------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Brief Description</b> | Financial analysis project focused on credit-card-related data and business reporting.                                                                  |
| <b>Tools / Approach</b>  | Power BI; data cleaning; data modelling; DAX; interactive dashboards and visual analysis.                                                               |
| <b>Key Outcomes</b>      | Built an interactive financial dashboard to analyse key credit-card metrics and present insights in a business-friendly format.                         |
| <b>GitHub Link</b>       | <a href="https://github.com/Mahanand4/Credit_Cards_Financial_Analysis_PowerBI">https://github.com/Mahanand4/Credit_Cards_Financial_Analysis_PowerBI</a> |

## 3. Financial\_Dashboard\_Creation

|                          |                                                                                                                                        |
|--------------------------|----------------------------------------------------------------------------------------------------------------------------------------|
| <b>Brief Description</b> | Power BI dashboard project designed to analyse financial information and communicate business performance through interactive visuals. |
| <b>Tools / Approach</b>  | Power BI; Power Query; DAX; data modelling; dashboard design; filters and interactive visuals.                                         |
| <b>Key Outcomes</b>      | Developed an interactive dashboard that converts financial data into visual KPIs and decision-support insights.                        |
| <b>GitHub Link</b>       | <a href="https://github.com/Mahanand4/Financial_Dashboard_Creation">https://github.com/Mahanand4/Financial_Dashboard_Creation</a>      |

## 4. BCG\_Data\_Science\_Project

|                          |                                                                                                                                |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------|
| <b>Brief Description</b> | Data science/business analytics project focused on analysing data to derive business-oriented insights.                        |
| <b>Tools / Approach</b>  | Data analysis; Python/data-science workflow; exploratory analysis; business interpretation.                                    |
| <b>Key Outcomes</b>      | Worked through a structured data-science case to analyse the dataset and translate analytical findings into business insights. |
| <b>GitHub Link</b>       | <a href="https://github.com/Mahanand4/BCG_Data_Science_Project">https://github.com/Mahanand4/BCG_Data_Science_Project</a>      |

## 5. Python\_And\_SQL\_Project

|                          |                                                                                                                                          |
|--------------------------|------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Brief Description</b> | Data analysis project combining Python and SQL to practise database querying, analytical problem-solving, and business-focused analysis. |
| <b>Tools / Approach</b>  | SQL; Python; database querying; data analysis; business questions.                                                                       |
| <b>Key Outcomes</b>      | Used SQL queries and Python-based analytical techniques to answer business questions and extract relevant insights from structured data. |
| <b>GitHub Link</b>       | <a href="https://github.com/Mahanand4/Python_And_SQL_Project">https://github.com/Mahanand4/Python_And_SQL_Project</a>                    |
