

Data Analyst Project Portfolio

Project summary document for mentor review — Project Name, Brief Description, Tools/Approach, Key Outcomes and GitHub Link

1. Tata Data Visualisation

Brief Description	Data analysis and business insights project based on an online retail transaction dataset, completed as part of the Tata Data Visualisation Virtual Experience.
Tools / Approach	Power BI / data visualisation; data cleaning and preparation; time-series analysis; country and customer analysis; geographic/map visualisation.
Key Outcomes	Created business-focused visual insights covering revenue trends, top countries, top customers, and geographic markets, with findings translated into practical business recommendations.
GitHub Link	https://github.com/Mahanand4/Tata_Data_Visualisation

2. Credit Card Financial Analysis – Power BI

Brief Description	Financial analysis project focused on credit-card-related data and business reporting.
Tools / Approach	Power BI; data cleaning; data modelling; DAX; interactive dashboards and visual analysis.
Key Outcomes	Built an interactive financial dashboard to analyse key credit-card metrics and present insights in a business-friendly format.
GitHub Link	https://github.com/Mahanand4/Credit_Card_Financial_Analysis_PowerBI

3. Financial Dashboard – Power BI

Brief Description	Power BI dashboard project designed to analyse financial information and communicate business performance through interactive visuals.
Tools / Approach	Power BI; Power Query; DAX; data modelling; dashboard design; filters and interactive visuals.
Key Outcomes	Developed an interactive dashboard that converts financial data into visual KPIs and decision-support insights.
GitHub Link	https://github.com/Mahanand4/Financial_Dashboard_PowerBI

4. BCG Data Science Project

Brief Description	Data science/business analytics project focused on analysing data to derive business-oriented insights.
Tools / Approach	Data analysis; Python/data-science workflow; exploratory analysis; business interpretation.

Key Outcomes	Worked through a structured data-science case to analyse the dataset and translate analytical findings into business insights. Final project PDF can be added to the repository when ready.
GitHub Link	https://github.com/Mahanand4/BCG_Data_Science_Project

5. Google Store Analysis

Brief Description	Analysis project focused on Google Store data to identify patterns and business insights.
Tools / Approach	SQL/data analysis; data cleaning; exploratory analysis; business-focused reporting.
Key Outcomes	Analysed store-related data to identify useful patterns and present findings that can support business understanding and decision-making.
GitHub Link	https://github.com/Mahanand4/Google_Store_Analysis

6. Target Database – SQL/Python

Brief Description	Database analysis project using Target-related data to practise SQL and analytical problem solving.
Tools / Approach	SQL; Python; database querying; data analysis; business questions.
Key Outcomes	Used database queries and analytical techniques to answer business questions and extract relevant insights from structured data.
GitHub Link	https://github.com/Mahanand4/Target_Database_SQL_Python

7. SQL Exercises

Brief Description	SQL practice repository containing exercises designed to strengthen querying and analytical problem-solving skills.
Tools / Approach	SQL; SELECT statements; filtering; aggregation; GROUP BY; joins; subqueries and related query concepts.
Key Outcomes	Practised core SQL concepts through hands-on exercises to build confidence for Data Analyst interview and project work.
GitHub Link	https://github.com/Mahanand4/SQL-Exercises

Note: The project descriptions and outcomes are written as concise portfolio summaries. Where a project is still being finalized, the document states that rather than presenting it as fully complete.
